

# Volunteers Needed For ADHD Research

We are conducting a research study looking at the effect of stimulant medication and/or neurofeedback on concentration abilities in children who have ADHD.

## What Would I Have To Do If I Took Part?

The study has 3 parts:

1. Meet the researcher at the Learning Assessment and Neurocare Centre for 2 hours to complete questionnaires, a brain wave reading and a computer concentration test.
2. Receive your usual treatment at the Learning Assessment and Neurocare Centre (stimulant medication and/or neurofeedback) for 15 weeks.
3. After 15 weeks, meet with the researcher again for 2 hours to complete further questionnaires, a brain wave reading and a computer concentration test.

A family's involvement in this study would be of significant value. The findings will hopefully benefit the understanding and progression of treatment in the field of conditions involving attention difficulties.

## Who Can Take Part?

You can take part if:

- If you are a patient at the Learning Assessment and Neurocare Centre
- Your child is aged between 7 and 17 years old
- Your child has a diagnosis of ADHD, combined subtype
- Your child is only taking stimulant medication (i.e methylphenidate such as Concerta XL, Equasym XL, MedikineXL or Ritalin)
- Or your child is receiving neurofeedback

## For Further Information or To Take Part
